

GERMAINE DE CAPUCCINI  
TIMEXPERT SRNS

THE  
REGENERATING  
POWER  
TIMEXPERT  
SRNS®

Based on the Natural Synchronised Regenerating System the TIMEXPERT SRNS global anti-ageing line from Germaine de Capuccini stimulates self-protection during the day and reactivates the cellular regenerating mechanisms during the night.

TIMEXPERT SRNS is created especially to protect the *Stress Capital* of the skin, that is, the defence capacity the skin has against external and internal aggression that produce its ageing.

#### **At night**

the exclusive ingredient  
*RC-ADVANCED*\* works protecting and helping to repair cellular DNA.

#### **During the day**

its main ingredient *ZINC-GLYCINE COMPLEX*\*\* works. It strengthens the intracellular capacity of defence against free radicals and preserves the skin's Stress Capital.

All the products have been dermatologist-tested.

\* RC-Advanced, exclusive ingredient from Germaine de Capuccini.

\*\* Zinc-Glycine Complex, ingredient awarded with the IFSCC prize (considered the Nobel prize of Cosmetics).

# THE REGENERATING POWER TIMEXPERT SRNS<sup>®</sup>

rejuvenates your skin in 7 days<sup>1</sup>

An innovative active ingredient increases 8

**Germaine de Capuccini** perfects the classical strategy of action of TIMEXPERT SRNS including in its anti-ageing technology **the epigenetics science.**

## What is epigenetics?

A new scientific discipline that makes possible what until today was unthinkable: to influence the behaviour of the genes to achieve their optimal performance. Today we know that the environment, the lifestyle, the emotions... to sum up, **the history of the skin**, generate epigenetic factors that influence our way of ageing more than the genetic inheritance itself.

TIMEXPERT SRNS is thus placed at the vanguard of cosmetic science; on the frontier between present and future.

## THE KEY: EPIGENOL

A promising ingredient extracted from the Calendula flower by means of a complex process of enzymatic engineering. It works like a true switch that turns "ON" the genes *turned off* by certain epigenetic factors. The generation of youthfulness proteins is normalised.
